TO Whom it May Concern:

Please accept this letter as our endorsement of Windular Research and Technologies Inc. and their innovative approach to an alternative energy source for telecom sites.

Varcon Inc. is a Canadian based engineering firm that specializes in communication structures and site development and we have been involved with Windular on several ground-breaking projects in Canada and Pakistan. We admire and endorse their goal to “Provide an alternative clean source of power for telecommunication sites that is both reliable and cost effective”. The unique and innovative design developed by Windular Technologies is practical and ground breaking and will provide a much needed alternative to site power requirements for telecommunication companies around the world.

The Windular Research and Technologies design is practical and very robust, meeting or exceeding applicable standards. The design utilizes a portion of the tower (lower half) that is typically free to be used and all installations are verified to satisfy the relatively small loads imposed on the structure by the unit.

This unique product may be the cost efficient solution that communication site owners have sought for many years.

T.M. (Tom) Vardy, PE, P.Eng.
